Latrine Supplied By Other

CONSTRUCTION

The latrine must be constructed to meet the following requirements:

1. The vault must be watertight, constructed of durable material, and not subject to excessive corrosion, decay, frost damage, or cracking.
2. The access or pumping port should be located outside of any structure and should have a minimum diameter of 8 inches. This access must have a tight, locking lid.
3. The pit privy (latrine structure sitting on the vault) must be located to exclude surface water, be constructed with openings to greater than $\frac{1}{16}$ inch to prohibit access of insects, be vented with a screened flu or vent stack having a sectional area of at least 7 inches per seat and extend at least 12 inches above the roof, be constructed on a level site with the base of the building being at least 6 inches above the natural ground surface as measured 18 inches from the sides of the building, and the bottom of the pit should be between 3 feet and 6 feet below the original ground surface.

INSTALLATION

General Installation involves excavation, leveling bottom of hole with drain aggregate, installing latrine, backfilling around latrine and landscaping.

EXCAVATION

- A. Excavate subsoil to a point 12 inches deeper than required for latrine installation.
 1. Depth of excavation is 50 inches for the precast latrines manufactured by Flathead Concrete.
 2. Finish floor elevation shall be a minimum of 4-6 inches above natural grade measured at the front entrance.
- B. Minimize over excavation. Stockpile excavated material for later backfilling and landscaping.
- C. Compact bottom of hole with three passes of whacker or skid plate compaction device.

LEVELING

- A. Use small gravel, 3/8 inch minus gravel, and place enough in bottom of hole such that when compacted, it will be 12 inches deep.
- B. Compact leveling material with three passes of compaction device.
- C. Level base for installation of latrine.

LATRINE INSTALLATION

- A. The precast latrine will be set by the supplier.
- B. Insure that latrine sits level and plumb when done installing.

BACKFILLING

- A. Place a foot of 3/8 inch gravel around base of vault and compact.
 1. Remove rocks larger than 6 inches in diameter from the fill.
 2. Remove branches, roots and other or organic debris in fill.

LANDSCAPING

- A. Slope grade away from latrine.
- B. Blend fill slope into surrounding terrain.
- C. Remove surplus fill material.
- D. Remove soil to a depth of 2 inches beneath location for entrance slab and compact.
- E. Place two inches of 3/4 inch pea gravel for bedding, level and compact.
